EDUCATION

Georgia Institute of Technology

Expected May 2027

B.S. Computer Science | Systems Architecture and AI

GPA: 3.80/4.0; Dean's List | Atlanta, GA

Coursework: Data Structures and Algorithms, Operating Systems, Computer Architecture, Machine Learning

EXPERIENCE

VeriTrade

October 2025 - Present

Founding Engineer

- Led architecture and implementation of Vera AI, an authenticated trading assistant shipped to private MVP; grounded LLM workflows in connected brokerage data, portfolio context, and proprietary performance metrics.
- Built orchestration for multi-step research, task execution, and scheduled agents using OpenRouter, Firecrawl, web search, EODHD, and Massive; reduced response latency by 30% through prompt routing, tool selection, and provider telemetry.
- Scaled the portfolio metrics backend with PostgreSQL indexing, batched background jobs, Redis/Upstash caching, and Vitest coverage for a platform supporting 20+ brokerage and wallet integrations.
- Independently completed an internal API version migration, validating the changes with unit tests and manual account testing.

WillCool Corporation

December 2024 - August 2025

Software Engineer Intern

- Built full-stack features with Next.js, React/TypeScript, Django REST Framework, and Supabase authentication for a web application designed to support 1,000+ users.
- Developed and maintained REST APIs for search and account workflows; collaborated through tickets, code reviews, and Agile development cycles.
- Improved release reliability with Docker, GitHub Actions CI/CD, unit and integration tests, and logs and metrics for debugging regressions and production issues.

PROJECTS

LedgerLens | Java, Spring Boot, React/TypeScript, Python/LangGraph, PostgreSQL, Azure

- Built a financial-controls platform with 4 versioned controls and 6 event types, exact BigDecimal calculations, idempotent ingestion, and human approvals; detected all issues with no false positives on an 8-scenario golden dataset.
- Developed a LangGraph investigator with 5 read-only tools, PostgreSQL checkpoints, policy citations, scoped access, and fail-closed validation; achieved 100% task success and citation precision across 9 adversarial cases.
- Designed Azure infrastructure with Service Bus, ADLS, Databricks/Delta Lake, Entra ID, Key Vault, private endpoints, and Bicep; validated the platform with 50 automated tests, 15 Flyway migrations, and Playwright journeys.

Agentflow | TypeScript, Node.js, Vitest, Supabase/PostgreSQL, Codex CLI

- Built a local AI development orchestrator with task graphs, isolated Git worktrees, human approval gates, QA loopbacks, audit artifacts, and safe fast-forward finalization.
- Implemented Codex CLI execution, database audit logging, interactive workflow controls, session and worktree cleanup, and prompt-budget optimization; covered behavior with 163 Vitest tests.

AAPL Next-Day Direction Classifier | Python, scikit-learn, Pandas, NumPy

- Built headline-sentiment and technical-indicator pipelines using TF-IDF, Logistic Regression, and Random Forest; evaluated chronological splits with confusion matrices, ROC curves, and feature importance.
- Achieved 0.803 accuracy / 0.712 macro-F1 on sentiment and 0.923 accuracy / 0.947 F1 on ensemble baselines.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL, C++, Rust, C, HTML/CSS

Frameworks: Spring Boot, React, Next.js, Node.js, Django REST Framework, FastAPI, LangGraph, PySpark

Data and cloud: PostgreSQL, Supabase, Redis/Upstash, Microsoft Azure, ADLS Gen 2, Vercel, Docker

Testing and tools: Git, GitHub Actions, Vitest, Playwright, scikit-learn, Pandas, NumPy, OpenAI/OpenRouter APIs
